ULTRAN POLITUR SERIES

MODERN POLITUR FOR PROTECTION
AND BEAUTIFY YOUR
WOODEN JOINERIES

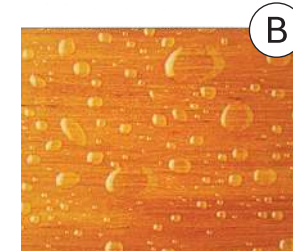

WOOD INTRODUCTION

Wood is an important element in the building. Usually, wood is widely used on door, frame, window, floor, list plank, balcony, side wall, gazebo, pergola and others. Besides being durable and solid, wood has an irreplaceable natural beauty whereby each wood has a unique color, grain and characteristics. To obtain wood water resistant ability, it requires wood finishing system that has water repellent and permeable ability. It allows the moisture inside wood to be diffused. For UV resistant ability, it requires wood finishing system that has UV absorbent.

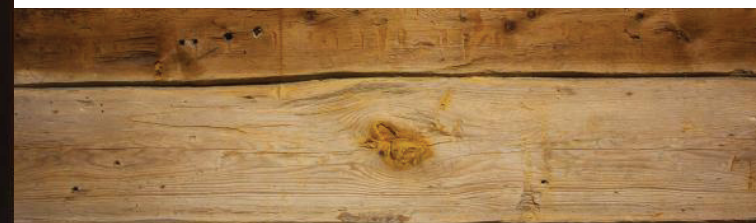

• Picture on the left shows function of UV absorber, it reflects sun light and permeable ability which allows water to be diffused freely.

• This picture shows water repellent's function, it protects wood from outside water

ULTRAN POLITUR P-01 is a wood finishing system specially formulated to solved all problems above. With it's permeable, water repellent and UV absorbent ability, **ULTRAN POLITUR P-01** is suitable for wooden joineries such as door, wooden structures, stairs, door frame, etc.
